

QUALITY ASSURANCE AT BAJRA TECHNOLOGIES

Tribhuvan University Institute of Science and Technology

**A Final Year Internship Report Submission in
Partial Fulfillment of the Requirement for the Degree of Bachelor of Science
in Computer Science and Information Technology**

**Under the Supervision of Mr. Mukeshwor Shah Lecturer
St. Lawrence College**

Submitted by

Ram Kumar Timalina(T.U Roll No. 26023/077)

Submitted to

St. Lawrence College

Department of Computer Science and Information Technology Chabahil, Kathmandu,
Nepal

QUALITY ASSURANCE AT BAJRA TECHNOLOGIES

Tribhuvan University Institute of Science and Technology

A Final Year Internship Report Submission in
Partial Fulfillment of the Requirement for the Degree of Bachelor of Science in
Computer Science and Information Technology

Submitted to

St. Lawrence College

Department of Computer Science and Information Technology Chabahil, Kathmandu,
Nepal

Submitted by

Ram Kumar Timalsina(T.U Roll No 26023/077)

DECLARATION

The Internship report entitled “**Quality Assurance at Bajra Technologies**” is being submitted to the Department of Computer Science and Information Technology, Chabahil, Kathmandu, Nepal under the supervision of **Mr.Mukeshowr Shah**. This project is original and has not been submitted earlier in part or full in this or any other form to any university or institute, here or elsewhere, for the award of any degree.

By

Ram Kumar Timalisina(26023/077)

MENTOR’S RECOMMENDATION

I hereby recommend that this internship report prepared under my mentorship by **Ram Kumar Timalina** entitled “**Quality Assurance at Bajra Technologies**”.in partial fulfillment of the requirements for the degree of Bachelor of Science in Computer Science and Information Technology (BSc. CSIT), is processed for the evaluation.

.....

Mr. Human Hitang

QA(L1 Engineer)

(Internship Mentor)

Bajra Technologies Pvt. Ltd.Charkhal, Kathmandu

SUPERVISOR’S RECOMMENDATION

It is my pleasure to recommend that a report on “**Quality Assurance at Bajra Technologies**” has been prepared under my supervision by **Ram Kumar Timalina** in partial fulfilment of the requirement of the degree of Bachelor of Science in Computer Science and Information Technology (BSc. CSIT). Their report is satisfactory to process for future evaluation.

.....

Mr. Mukeshwar Shah

Project Supervisor

Department of Computer Science and Information technology St. Lawrence College

Chabahil, Kathmandu

CERTIFICATE OF APPROVAL

Date:11/06/2025

This is to certify that this Internship final-defense project report entitled “**Quality Assurance at Bajra Technologies**” is a bonafide report of the work carried out by **Mr. Ram Kumar Timalina** under the guidance and supervision for the degree of B.Sc. in Computer Science and Information Technology at St. Lawrence College, Tribhuvan University.

To the best of my knowledge and belief, this work embodies the work of candidate, fulfills the requirement of the ordinance relating to the bachelor’s degree of the university and is upto the standard in respect of content, presentation, and language for being referred to the examiner.

..... Mr. Basanta Gyawali Program Coordinator Department of CSIT St.Lawrence College	 Mr. Mukeshowr Shah Supervisor Department of CSIT St.Lawrence College
..... Internal Examiner	 External Examiner

CORPORATE CERTIFICATE

Certificate of Traineeship

This certificate is awarded to

Mr. Ram Kumar Timalsina

for successfully completing the

Traineeship Program (J-25-03) on QA

from March 17, 2025 to June 13, 2025.

Nishant Karki

CEO

Bajra Technologies P. Ltd.

ACKNOWLEDGMENT

I want to express my deepest appreciation to all those who guided me to complete this report. A special gratitude to **Mr. Basanta Gyawali** coordinator, and my project supervisor **Mr. Mukeshowr Shah** for his invaluable guidance and encouragement during this project whose contribution in providing suggestions and encouragement helped me to coordinate my Internship program, especially in writing this report.

I am also very grateful to Bajra Technologies Pvt. Ltd. for giving me this wonderful opportunity to work in the IT industry. Special thanks to my mentor **Mr. Human Hitang**, QA Engineer for providing me with all the resources I need and timely advice with encouragement.

I would like to thank all of my friends, seniors, and colleagues for their valuable suggestions, comments, and support. Also, this could not have been possible without the participation and assistance of so many people whose names may not all be enumerated.

ABSTRACT

BizOS is an innovative project and workflow management software engineered to significantly enhance organizational productivity through a blend of robust modular features and a focus on seamless scalability. The platform's foundation is built upon fully developed and actively utilized core functionalities, including team management, meeting booking, reporting, time log tracking, and comprehensive employee management. These established modules are currently facilitating efficient coordination and workforce oversight within organizations. Concurrently, BizOS is executing a phased rollout for additional functionalities, with modules such as Survey and Appraisal currently in the staging phase. This involves rigorous testing and refinement to ensure stability and reliability prior to full deployment. As a QA Intern, my role was pivotal in ensuring software quality through test case design, manual testing, and Cypress automation for end-to-end testing. By implementing automated testing strategies, I contributed to improving system reliability, performance efficiency, and bug detection. This experience reinforced my understanding of quality assurance methodologies, agile development practices, and the significance of automation in modern software testing, leading to a more scalable and efficient management solution. This strategic, incremental development approach ensures BizOS evolves into a dependable, enterprise-grade solution, meticulously tailored for dynamic and growing work environments.

CHAPTER 1

INTRODUCTION

1.1 Introduction

As an Internship experience at Bajra Technologies as a Quality Assurance (QA) Engineer was a transformative and invaluable part of my journey in the field of software testing and quality assurance, got the chance to work extensively with the Cypress testing framework, a modern QA tool, during my time at Bajra Technologies. My main Internship duties as a QA Engineer focused on guaranteeing the quality and dependability of software products through thorough testing, validation, and defect reporting. I developed my abilities in creating thorough test plans, carrying out test cases, locating and documenting flaws, and working directly with development teams to speed problem resolution.

BizOS emerges as a comprehensive project and workflow management solution, addressing these needs by providing a unified platform. It integrates essential core functionalities for efficient coordination and workforce oversight. Through a phased development strategy, with new modules like Survey and Appraisal in testing, BizOS aims to provide robust, scalable features that empower organizations. This software is set to transform how businesses manage projects and people, fostering a more productive and adaptable work environment.

Space Invader is a web-based arcade game developed using HTML, CSS, and JavaScript, utilizing HTML Canvas for rendering dynamic game elements. Created as part of JavaScript learning during my Internship at Bajra Technologies, this project focuses on implementing key game development concepts such as sprite animation, collision detection, event handling, and game loop mechanics. Players control a spaceship to defend against waves of alien invaders using keyboard interactions.

Testing involved both manual and automated methods to identify and address software issues. Comprehensive documentation with tools like BizOS and Google Sheets ensured efficient issue tracking. Test cases were systematically created to examine all aspects of the platform, collaborating closely with the development team to meet sprint targets. Functional and validation testing verified software alignment with specifications, ensuring it met user needs. Smoke testing quickly confirmed basic functionality post-modifications, maintaining platform integrity.

1.2 Problem Statement

Our organization involves identifying the quality-related challenges that hampers our ability to deliver products/services that meet customer expectations. These challenges may include inconsistent product/service quality, issues, customer complaints, bugs, or a lack of standardized processes. By defining these problems, we aim to gain a clear understanding of the specific areas that require improvement and the underlying factors contributing to quality issues by testing and reporting them. This will serve as a foundation for developing targeted solutions and implementing a manual and automation testing that addresses these issues, bugs and drives continuous improvement across the organization.

1.3 Objectives

The objectives of project are:

- To conduct initial manual testing to identify faults in the software.
- To perform automation test to check whether the application is functioning as expected by the user.
- To generate report, and document bugs to ensure the work product is traceable and of high quality.

1.4 Scope and Limitation

The scope of the project is:

- Biz OS is a workflow management software that enhances organizational productivity by providing robust modular features and seamless scalability. It offers core functionalities like team management, meeting booking, reporting, time log tracking, and comprehensive employee management, which support efficient coordination and workforce oversight.
- Space Invader is a web-based arcade game created for JavaScript learning, using HTML, CSS, and Canvas to teach game mechanics and interactive design.

The limitation of the project is:

- Biz OS may experience integration challenges, performance challenges due to large database requiring custom development to seamlessly connect with specific legacy or third-party enterprise systems.

- Space Invader's gameplay is relatively simple, lacking advanced mechanics or multiplayer features that could enhance engagement and replay ability.

1.5 Report Organization

The project mainly emphasizes my work as an Interns at Bajra Technologies Pvt. Ltd. The project focuses on activity recording websites mainly on the front-end and API testing portion of the website. This project also includes the number of tasks, developers, and the problems they are facing in the task.

Chapter 1: Report Introduction

This chapter contains the skeleton view of the report's introduction. It includes elements like Declaration certificate, Acknowledgement, Abstract, Table of Contents, List of Figures, List of Tables, and List of Abbreviations.

Chapter 2: Organization Details and Literature Review

This chapter delves into comprehensive details about the organization. It includes an introduction to the company, an overview of its hierarchy, and an in-depth description of the Intern's department and the various working areas within the organization. This chapter provides crucial context for understanding the Internship experience within the specific organizational setting.

Chapter 3: Internship Activities

This chapter is concerned with Roles and Responsibilities, technical activities performed, description of the Project Involved during the Internship, tasks/activities performed during the Internship.

Chapter 4: Conclusion and Learning Outcomes

This portion includes the answer to all the objectives and aims from the general introduction. Also, the evaluation of the report, findings, learnings, and future recommendations are included in this portion.

CHAPTER 2

ORGANIZATIONAL DETAILS AND LITERATURE REVIEW

2.1 Introduction to Organization

Bajra Technologies is one of Nepal's leading software development companies, founded in 2011. They specialize in delivering full-cycle software development services that help businesses accelerate their digital transformation with smart, innovative technology strategies.

The team at Bajra is known for leveraging the latest technologies to streamline development processes. They create tailor-made software solutions by first deeply understanding each client's unique needs. With a strong focus on quality, they deliver software that is robust, scalable, and secure.

Recognized as a reliable tech partner, Bajra Technologies is dedicated to driving growth for its clients through technology. Over the years, they've successfully completed more than 70 projects for 50+ clients across four continents.

Their team of over 150+ skilled professionals works with a wide range of technologies, including Java, Python, React, Angular, mobile app development frameworks, and cutting-edge fields like Artificial Intelligence and Machine Learning. Through a combination of technical excellence and client-first mindset, Bajra ensures the solutions they build help businesses stay innovative and competitive in today's fast-paced digital world.

2.2 Organizational Hierarchy

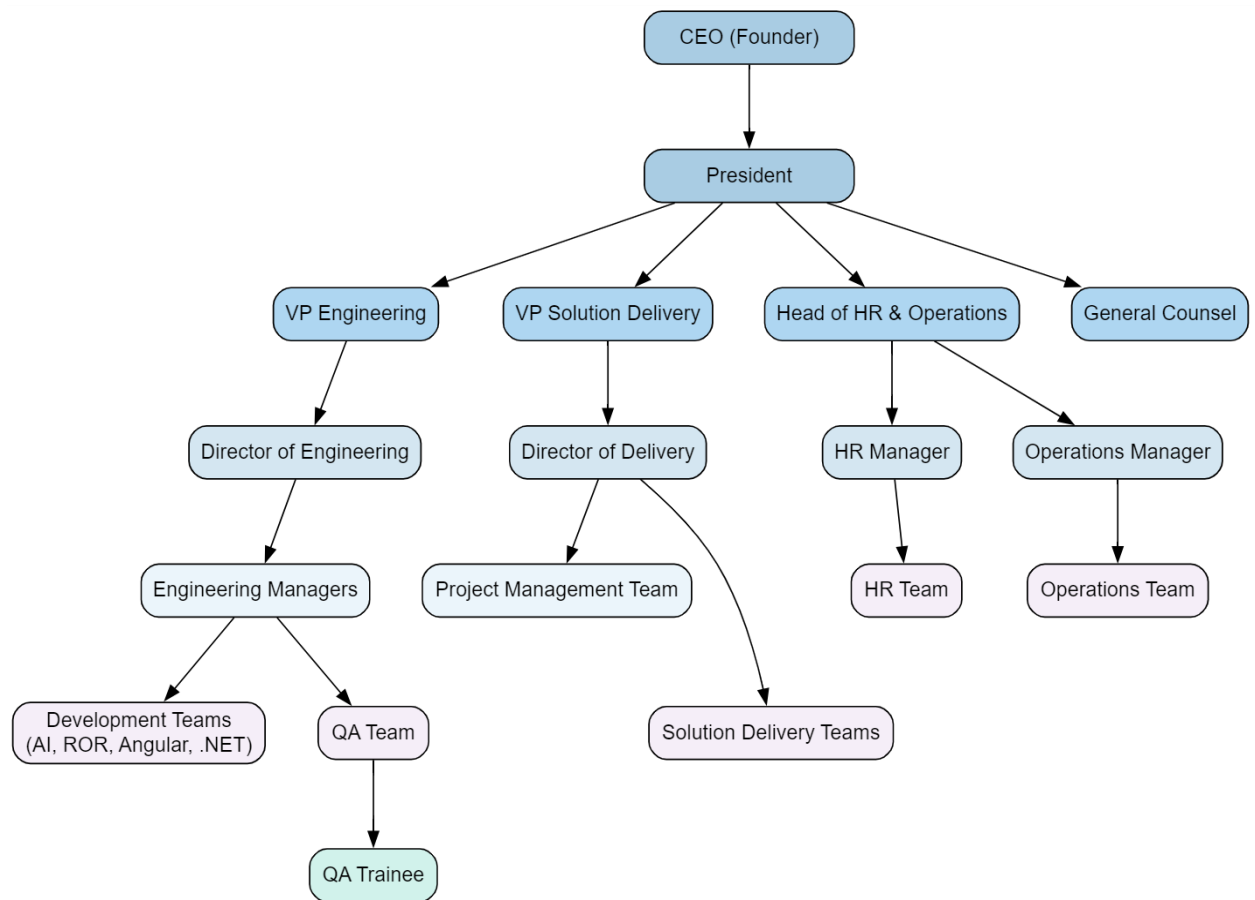

Figure 2.1 Organizational Hierarchy of Bajra Technologies P. Ltd.

The organizational structure of Bajra Technologies P. Ltd., where I completed my Internship, follows a centralized hierarchy. The company operates under the leadership of the CEO (Founder), with the President overseeing various departments including Engineering, Solution Delivery, HR & Operations, and Legal. Each department is led by respective Vice Presidents or Managers who further supervise their specialized teams. The structure reflects a clear chain of command and departmental coordination, ensuring efficient workflow and accountability.

During my Internship at Bajra Technologies P. Ltd., I observed that the company follows a well-structured and collaborative approach to delivering high-quality software solutions. They focus on building a strong technical foundation by clearly understanding client goals, carefully designing platforms with attention to performance, scalability, and security, and using user-focused UI/UX principles to create seamless and visually appealing experiences. Agile methodologies, including scrum-based sprints and frequent feedback, ensure

continuous improvement, faster delivery, and early issue detection. Bajra also provides robust support in project management, consulting, and end-to-end maintenance services. They help clients with technology planning, change management, and ensure smooth software deployment with training and real-time monitoring. Their continuous delivery process and automated testing enhance reliability and speed. With strong analytics and custom hardware/software solutions, Bajra delivers personalized, data-driven services that meet unique business needs while promoting innovation and long-term growth. Bajra works under following domain:

1. Technical Architecture and Platform Design

- Define system structure, components, and tech stack based on client vision.
- Emphasize scalability, security, and long-term adaptability.
- Align platform design with business goals and user needs.

2. UI/UX Design and User Experience

- Create user-friendly, consistent, and accessible designs.
- Plan smooth user journeys using responsive and performance-driven approaches.
- Use regular feedback loops for continuous improvement.

3. Agile Software Prototyping and Development

- Follow Scrum-based agile development with 2-week sprints.
- Encourage iterative progress with regular reviews and team collaboration.
- Enable rapid adjustments based on real-world feedback.

4. Project Management and Support

- Offer strategic planning, resource allocation, and risk management.
- Align project execution with business goals through effective communication.
- Provide dashboards, reporting, and portfolio oversight.

5. Consulting and Advisory Services

- Support clients with technology planning and organizational change.
- Offer guidance in development, QA, infrastructure, and IT strategy.
- Recommend tech investments and transformation roadmaps.

6. Support and Maintenance Services

- Ensure smooth software deployment and real-time monitoring.
- Conduct training sessions and post-launch validations.
- Provide transparent updates and proactive issue resolution.

7. Continuous Delivery and Code Deployment

- Automate build, test, and deployment pipelines.
- Minimize manual errors and ensure high-quality releases.
- Keep clients updated with real-time progress and testing insights.

8. Software Monitoring and Analytics

- Use modern tools to monitor app performance and user behavior.
- Provide actionable insights for better decision-making and experience.
- Proactively detect issues and reduce downtime.

9. Custom Hardware and Software Solutions

- Design tailored software and hardware based on unique client needs.
- Seamlessly integrate custom components to match business goals.
- Combine flexibility, innovation, and deep tech expertise

2.3 Description of Interns Department

The Interns department is handled according to the Interns position. The backend Interns are handled by the backend mentors whereas the frontend Interns are handled by the frontend department and QA department handled by QA department. Every day the Interns are given tasks to complete and evaluation is done according to the tasks. The company provide a very warm and easy atmosphere for all the Interns to learn accordingly to their pace and capacity. The Tech Lead provide QA Interns with the front end and the backend of the web application in localhost with the number of additional features to be tested. The test case of every feature is made and the bug is reported in BizOS or Google sheet. The QA engineer check whether the bug is actually an error on the code and assigned to the developers to fix the errors.

Table 2.1: Internship Details

Start Date	March 17 2025
End Date	June 13 2025
Mentor's Name	Human Hitang
Days of work	Monday to Friday (5)
Office hours	10:00 AM to 6:00 PM (8 hour)
Position	QA Interns(Internship)
Internship Period	3 months

2.4 Literature Review

Roadmap Online (RON) development team sought an automated testing solution for a web application. The team required a GUI testing tool that could reliably and efficiently execute test cases for the entire system and specific features. Cypress, a testing tool, was selected, and over 100 test cases were implemented. The test cases were divided into two sets: full system tests and targeted tests. Cypress's built-in commands and flexibility to create custom commands simplified the implementation. The Cypress Test Runner provided an interactive dashboard to visualize test execution. The testing efficiency reached 75%, although it varied based on processor speed. The team found intended bugs before deploying the application. Cypress proved easy to use, well-supported by a global community, and promising to the RON development team. The project resulted in a fully functional automated test environment for GUI testing, reducing the team's manual testing efforts. The application now has test cases for both full system and targeted testing (Taky, 2021).

The growing complexity and competitive pressures in software applications, which have raised the bar for quality assurance is addressed. It emphasizes the importance of software testing in the Software Development Lifecycle and highlights the need for enhanced and efficient methodologies and techniques. The paper explores existing testing techniques, such as manual and automated testing, regression testing, performance testing, and exploratory testing, while acknowledging their strengths and limitations. Additionally, it proposes improved testing approaches that incorporate advancements in tools, technologies, and practices to achieve better quality assurance outcomes. The objective is to contribute to the field of software testing by providing insights into current practices and suggesting innovative methodologies to ensure higher standards of quality assurance in software development projects (Jamil et al., 2016).

Emphasizing the significance of a methodological and systematic approach to software development, this discussion highlights key elements such as requirement analysis, software requirement specification, scoping and modeling, and design and architecture. This discussion particularly focuses on reviewing and comparing two types of software testing: manual and automated, with the aim of identifying the most suitable techniques for effective software testing. Additionally, it highlights various software testing tools that can

aid in the testing process. By exploring and evaluating these testing types and tools, the objective is to provide insights and guidance for selecting appropriate approaches to ensure the quality of software products (Rana et al., 2019).

CHAPTER 3 INTERNSHIP ACTIVITIES

3.1 Roles and Responsibilities

My role and responsibilities as a QA Interns at Bajra Technologies Pvt. Ltd. include a variety of duties to guarantee the reliability and quality of our software products. My roles and responsibilities are:

- To conduct manual and automate testing to identify faults and issues in the software.
- To generate record and document to the issues using BizOS or Google Sheets to maintain organized records.
- To create test cases and scenarios is essential of the software's functionality.
- To collaborate closely with the development team to align testing efforts with sprint targets for the week.
- To perform functional and validation testing to ensure the software aligns with its intended specifications.
- To perform smoke testing to verify the functionality of the software after modifications of the software.

3.2 Weekly Logs

Table 3.1: Detail Information of Weekly Log

Week	Focus Area	Topics Covered
Week 1(March - 17)	Linux & Git Basics	• Linux commands, Shell Scripting, SSH, Git basics, GitLab SSH setup • Understanding of the work environment, tasks and responsibilities as an Interns in a company. • Learn about the company working culture and the approach the company follows to do tasks. • Learned basic of Linux and bash scripting • Started updating work detail in BIZOS • Getting started with the fundamentals of web technology i,e;HTML and CSS,Gitlab.

Week 2	HTML & CSS + GitLab Pages	HTML, CSS, Responsive Design, Figma to Code conversion, Deployment to GitLab Pages
Week 3	JavaScript Fundamentals	Data Types, Variables, Operators, Control Flow, Arrays, Functions, Promises, Async/Await
Week 4	JS DOM, OOP & Game Dev	DOM Manipulation, JS Dev Tools, OOP, Error Handling, Space Invaders Game
Week 5	Database Management	ER Diagrams, SQL Syntax (DDL, DML), Joins, Constraints, Aggregate Functions
Week 6	QA Basics	- Test Plans, Test Cases, Bug Life Cycle, Bug Reporting, Web Testing Checklist, DevTools, Locators - Testing of " Todo Application" - Performed manual testing on website and automated testing of login page and dashboard. - Group project BPT also started and wrote test cases for home section
Week 7	Cypress Basics	Cypress Installation, Writing Tests, Environment Variables, Hooks, Error Handling, Best Practices
Week 8	Cypress Intermediate	- API Testing with Cypress, Intercepts, Debugging, Git Integration, CI/CD Concepts - Moved on to test "BPT Game Management System". - Performed manual and automated testing on website. - Smoke testing as a confirmation for the QA team to proceed with further testing. - Security Testing with ZAP
Week 9	Cypress Advanced	Dashboard Integration, Cross-Browser & Cross-Origin Testing, Full To-Do App Automation
Week 10	API & Security Testing	Postman Scripting, Newman CLI, OWASP, ZAP, Security Vulnerabilities Testing

Week 11	Performance Testing	JMeter Basics, Load & Stress Testing, Recording, Correlation, Blazemeter
Week 12 Week 13(June - 13)	Mobile/Desktop Automation & Final Project	- Appium & WebDriverIO, WinAppDriver - Final Project on testing BizOS - Module:Appraisal and Survey - Final Project: Cypress + Postman + Test Docs + Presentation

3.3 Description of the Project

BizOS is a workflow management software designed to enhance organizational productivity. It features robust modules for core operations like team and employee management, meeting booking, reporting, and time log tracking, all actively in use. Additional functionalities, such as Survey and Appraisal modules, are currently in a staging phase, undergoing testing. This phased development aims to deliver a reliable, scalable, and enterprise-grade solution suited for dynamic and growing work environments.

3.4 Task Performed

3.4.1 Manual testing

Whenever features are assigned for testing, firstly the requirement of the feature is clearly learned and understood. After understanding of the requirement test scenario is created which basically are abstract level of test cases. Test cases are then created and written on the basis of the test scenarios. The test scenario and cases are created by using Google Sheets and shared within the QA team and also with the product owner. Before the execution of testing on the basis of test cases and scenario, the scenarios and cases are first sent to the manager for approval.

3.4.2 Automation testing

The features of the entire web application are tested using the automation tools. Cypress is used to automate the web application. The result of the automation testing is then reported to the supervisor and then the result is forwarded to the Project Manager for the approval. A script is written in the JavaScript (JS) which returns result (Pass or Fail) as the test result.

3.4.3 Positive testing

Positive test cases ensure that users can perform appropriate actions when using valid data. It is performed with the assumption that only valid and relevant things will occur. In short, this form of testing seeks to confirm that the software does exactly what it's supposed to do. If an error is encountered during positive testing, the test fails.

Example of positive testing:

For User Login:

- Login with the valid email and valid password.
- For games: Selecting the available games.

3.4.4 Negative Testing

Negative Testing is the practice of finding useful feedback when things go wrong. Negative testing uses invalid input data, or undesired user behaviors, to check for unexpected system errors. It is also known as error path testing or failure. And it helps us to identify more bugs and enhance the quality of the software application under test.

Example of negative testing:

For User Login:

1. Login with invalid email and valid password. Login with valid email and invalid password. Login with invalid email and invalid password.
2. For game: searching for non-existing game.

3.4.5 Test case and Test scenarios

Google Sheet is used for creating the test cases. The positive and negative scenarios are created and according to the scenarios the result is determined to be passed or failed. Different scenarios require different test cases and each test case is used to check the Expected and Final result. By comparing those result, the quality is determined.

3.4.5.i For Biz OS:

Table 3.2: Test Case for Appraisal

TEST_SECTION	TEST_CASE_ID	TEST_CASE	PRE_CONDITION	TEST_STEPS	TEST_DATA	EXPECTED RESULT	STATUS	REMARK	AUTOMATION STATUS
Appraisal	TC_AP_001	Verify Appraisals is visible when logged in with manager credentials	User should be logged in with manager	1.Click on dropdown icon 2.Observe the header contents	email:normaluser@yopmail.com password:1234	1.Appraisal should not be visible 2.Header should have items like "Quarter", "Appraisal" and "Survey"	pass		Yes

			credentials						
Reporting - Access	TC_AP_002	Verify manager cannot access the Reporting module		1. Go to the 'Appraisal' module. 2. Observe the header		The 'Reporting' menu item should be not visible.	pass		Yes
Appraisal Viewing - Manager	TC_AP_003	Verify Manager can view only appraisals of their assigned employees	Appraisals should exist, some assigned to this manager's employees.	1. Go to Appraisal Module.	Quarter: Q1	1. Only appraisals where the logged-in Manager is assigned to the employee should be displayed. 2. Appraisals of unassigned employees should not be visible.	pass		No
Appraisal Viewing - Manager	TC_AP_004	Verify Manager cannot view appraisals of unassigned employees	Appraisals of unassigned employees should exist.	1. Go to Appraisal Module. 2. Select a Quarter (e.g., Q1). 3. Attempt to search or navigate to an appraisal of an employee not assigned to them.	Quarter: Q1, Employee: (e.g., Employee X, not assigned to Manager)	1. The appraisal of the unassigned employee should not be visible to the Manager.	pass		No
Appraisal Viewing - Manager	TC_AP_005	Verify Manager can view answers filled out by their assigned employees	An appraisal of an assigned employee with submitted answers should exist.	1. Go to Appraisal Module. 2. Select the Quarter containing the appraisal of an assigned employee. 3. Click on the assigned Employee's appraisal card. 4. Go to 'Answers' on the right-hand side. 5. Select a survey form to view its details.	Appraisal ID: (e.g., AP-002), Survey Form: (e.g., Self-Evaluation)	1. The answers filled out by the assigned employee for the selected survey form should be clearly displayed.	pass		No
Appraisal Viewing - Manager	TC_AP_006	Verify Manager can use filters for viewing answers	User should be in answer view page.	1. Go to Appraisal Module > Select Quarter > Click assigned Employee's appraisal card > Go to 'Answers'. 2. Locate and use available filters (e.g., filter by survey form type).	Filter: Survey Form Type (e.g., Employee Self-Evaluation)	The displayed answers should be filtered according to the applied criteria.	pass		Yes
Survey Creation - Manager	TC_AP_007	Verify Manager can access Survey Creation form from Kanban		1. Go to Surveys Module > Kanban View. 2. Locate the 'Draft' column. 3. Click on the '+' icon within the 'Draft' column.		The 'Surveys / New' form should open, allowing the Manager to create a new survey.	pass		Yes
Survey Creation - Manager	TC_AP_008	Verify Manager cannot create Survey with missing Survey Title		1. Go to Surveys Module > Create. 2. Leave 'Survey Title' field empty. 3. Add a question with valid 'Title' and 'Question Type'. 4. Click 'Save'.	Question Title: 'Question 1', Question Type: 'Text' (example)	An error message 'Survey Title is required' or similar validation should be displayed. The survey should not be created.	pass		Yes
Survey Creation - Manager	TC_AP_009	Verify Manager cannot add a question with missing Title		1. Go to Surveys Module > Create. 2. Enter a valid 'Survey Title'. 3. Click 'Add a question'. 4. Leave the 'Title' field for the new question empty. 5. Select a valid 'Question Type'. 6. Click 'Save' (or	Survey Title: 'Manager New Survey', Question Type: 'Multiple Choice' (example)	An error message 'Question Title is required' or similar validation should be displayed. The question/survey should not be saved.	pass		Yes

				attempt to save the question/survey).				
Survey Creation - Manager	TC_AP_010	Verify Manager can discard changes to a new Survey		1. Go to Surveys Module > Create. 2. Enter a 'Survey Title' and add some questions. 3. Click 'Discard'.	Survey Title: 'Manager Temporary Survey'	All entered data should be cleared. The Manager should be returned to the Surveys list or a blank new survey form. The survey should not be created.	pass	Yes
Survey Creation - Manager	TC_AP_011	Verify Manager can add multiple questions of different types to a Survey		1. Go to Surveys Module > Create. 2. Enter a valid 'Survey Title'. 3. Add a section 'Manager Section A'. 4. Add Question 1: 'Manager Name?' (Text). 5. Add Question 2: 'Team Size?' (Number). 6. Add Question 3: 'Preferred Communication:' (Radio). 7. Click 'Save'.	Survey Title: 'Manager Advanced Survey', Q1 Title: 'Manager Name?', Q1 Type: 'Text', Q2 Title: 'Team Size?', Q2 Type: 'Number', Q3 Title: 'Preferred Communication:', Q3 Type: 'Radio'	All questions and sections should be added and displayed correctly within the survey structure. The survey should be savable.	pass	No
Survey Creation - Manager	TC_AP_012	Verify Manager can delete a question from a Survey	On the 'Survey s' page with at least one question should added.	1. Go to Surveys Module > Create. 2. Enter a valid 'Survey Title'. 3. Add a question (e.g., 'Manager Question to Delete'). 4. Locate the delete/trashcan icon next to the question. 5. Click on the delete/trashcan icon. 6. Confirm deletion if a dialog appears.	Survey Title: 'Manager Survey with Deletable Q', Question Title: 'Manager Question to Delete'	The question 'Manager Question to Delete' should be removed from the survey structure. The survey should be savable without the deleted question.	pass	Yes
Survey Management - Manager	TC_AP_013	Verify Manager can move their own Survey from 'Draft' to 'In Progress' via drag-and-drop	A survey created by the Manager should exist in the 'Draft' column.	1. Go to Surveys Module > Kanban View. 2. Locate a survey card created by the Manager in the 'Draft' column (e.g., 'Manager Created Survey'). 3. Click and drag the survey card from 'Draft' column to 'In Progress' column. 4. Release the mouse button.	Survey Title: 'Manager Created Survey'	The survey card 'Manager Created Survey' should move from the 'Draft' column to the 'In Progress' column. The survey status should update accordingly.	pass	Yes
Survey Management - Manager	TC_AP_014	Verify Manager can edit their own existing Survey	A survey created by the Manager should exist and should be accessible.	1. 		a Survey card in Kanban view to open its details		View. 2. Click on any survey card (e.g., 'Experience survey').	'Experience survey'	selected survey 'Experience survey' should open, allowing for editing or viewing its contents.		
Surveys - Questions Tab	TC-SK-008	Verify Admin can access the 'Questions' tab inside created surveys		1.Go to Surveys Module. 2.Click on the 'UserSurvey' /menu item. 3.Click on Question just left to "Description"		1.The 'Questions' should be displayed.	pass	No
Surveys - Questions Tab	TC-SK-009	Verify Admin can edit and view the questions in the 'Questions' tab		1.Go to Surveys Module. 2.Click on the 'UserSurvey' /menu item. 3.Click on Question just left to "Description" 4.Click on the edit button to edit survey and questions. 5.click on save button		1.The questions should be editable . 2.Survey should be updated	pass	Yes
Surveys - Questions Tab	TC-SK-010	Verify Admin can create a new question directly from the 'Questions' tab	1.On the 'Questions' tab. 2.Editing button is clicked	1. Go to Surveys Module > Questions tab. 2. Click on the 'Create' button. 3. Fill in 'Title' (e.g., 'New Global Question') and 'Question Type' (e.g., 'Text'). 4. Click 'Save'.	Question Title: 'New Global Question', Question Type: 'Text'	A new question 'New Global Question' should be created and appear in the Questions list.	pass	Yes
Surveys - Participations	TC-SK-011	Verify Admin can access the 'Participation s' tab from the Surveys module	Surveys module should be accessible.	1. Go to Surveys Module. 2. Click on the 'Participations' menu item.		The 'Participations' list view should be displayed, showing all survey participations status across all surveys.	pass	Yes
Surveys - Participations	TC-SK-012	Verify Admin can filter participations in the 'Participation s' tab	On the 'Participations' tab. Multiple participations should exist.	1. Go to Surveys Module > Participations tab. 2. Use the search/filter bar (e.g., search by Partner name or Survey title).	Filter: Partner 'Administrator'	The list of participations should be filtered to show only those matching the search criteria.	pass	Yes
Surveys - Participations	TC-SK-013	Verify Admin can delete participations		1. Go to Surveys Module > Participations tab. 2. Click any one participation 3.Click on action button 4.Click on delete button.		The participants should be deleted	pass	Yes
Surveys - Participations	TC-SK-014	Verify Admin can export participations data from the 'Participation s' tab		1. Go to Surveys Module > Participations tab. 2. Click on the 'Export' button (download icon).		A file containing the participations data (e.g., CSV, XLSX) should be downloaded to the user's device.	pass	No

Test Case ID: Test Case ID consists of ID that uniquely identifies the test cases.

Precondition. It consists of initial condition that needs to be satisfied for that feature to occur.

Test Steps: It consists of the all the step that needs to be carried out for the testing of the feature.

Expected Results: These are the correct results that is expected to occur for a feature to be

successful.

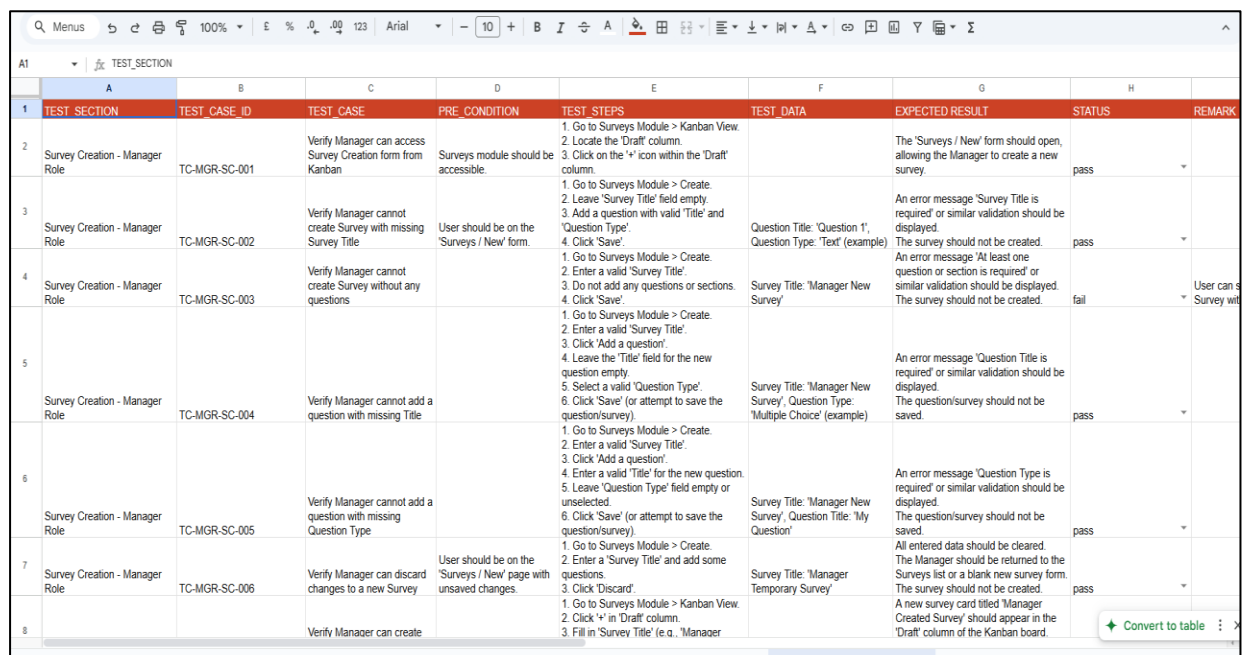

3.4.6 Report bug and assigne the task

Reporting the bug in the web application and verifying the bug and then reporting the bug to the supervisor to verify. Once the bug is verified, it is assigned to the developer and marked the status (Assigned, In Progress, and done).

3.4.7 Tools used

3.4.7.i Google sheet

Google sheet is used to create test cases and test scenarios. Maintaining the Logs and Test case scenarios are created in Google sheets in Bajra Technologies for the projects. The Google Sheets is used for the ease of the QA Interns to share the Test cases, Log file as well as the update lists. The test cases and test scenarios are made in google sheet and shared with the Tech Lead for the verification.

TEST_SECTION	TEST_CASE_ID	TEST_CASE	PRE_CONDITION	TEST_STEPS	TEST_DATA	EXPECTED RESULT	STATUS	REMARK
Survey Creation - Manager Role	TC-MGR-SC-001	Verify Manager can access Survey Creation form from Kanban	Surveys module should be accessible.	1. Go to Surveys Module > Kanban View 2. Locate the 'Draft' column. 3. Click on the '+' icon within the 'Draft' column.		The 'Surveys / New' form should open, allowing the Manager to create a new survey.	pass	
Survey Creation - Manager Role	TC-MGR-SC-002	Verify Manager cannot create Survey with missing Survey Title	User should be on the 'Surveys / New' form.	1. Go to Surveys Module > Create. 2. Leave 'Survey Title' field empty. 3. Add a question with valid 'Title' and 'Question Type'. 4. Click 'Save'.	Question Title: 'Question 1', Question Type: 'Text' (example)	An error message 'Survey Title is required' or similar validation should be displayed. The survey should not be created.	pass	
Survey Creation - Manager Role	TC-MGR-SC-003	Verify Manager cannot create Survey without any questions		1. Go to Surveys Module > Create. 2. Enter a valid 'Survey Title'. 3. Do not add any questions or sections. 4. Click 'Save'.	Survey Title: 'Manager New Survey'	An error message 'At least one question or section is required' or similar validation should be displayed. The survey should not be created.	fail	User can s Survey with
Survey Creation - Manager Role	TC-MGR-SC-004	Verify Manager cannot add a question with missing Title		1. Go to Surveys Module > Create. 2. Enter a valid 'Survey Title'. 3. Click 'Add a question'. 4. Leave the 'Title' field for the new question empty. 5. Select a valid 'Question Type'. 6. Click 'Save' (or attempt to save the question/survey).	Survey Title: 'Manager New Survey', Question Type: 'Multiple Choice' (example)	An error message 'Question Title is required' or similar validation should be displayed. The question/survey should not be saved.	pass	
Survey Creation - Manager Role	TC-MGR-SC-005	Verify Manager cannot add a question with missing Question Type		1. Go to Surveys Module > Create. 2. Enter a valid 'Survey Title'. 3. Click 'Add a question'. 4. Enter a valid 'Title' for the new question. 5. Leave 'Question Type' field empty or unselected. 6. Click 'Save' (or attempt to save the question/survey).	Survey Title: 'Manager New Survey', Question Title: 'My Question'	An error message 'Question Type is required' or similar validation should be displayed. The question/survey should not be saved.	pass	
Survey Creation - Manager Role	TC-MGR-SC-006	Verify Manager can discard changes to a new Survey	User should be on the 'Surveys / New' page with unsaved changes.	1. Go to Surveys Module > Create. 2. Enter a 'Survey Title' and add some questions. 3. Click 'Discard'. 1. Go to Surveys Module > Kanban View. 2. Click '+' in 'Draft' column. 3. Fill in 'Survey Title' (e.g., 'Manager	Survey Title: 'Manager Temporary Survey'	All entered data should be cleared. The Manager should be returned to the Surveys list or a blank new survey form. The survey should not be created. A new survey card titled 'Manager Created Survey' should appear in the 'Draft' column of the Kanban board.	pass

3.4.7.ii BizOS

BizOS is used for to fill up time log, reporting the bugs and errors in the web application, verifying the task, scrum or kanban planning, maintaining the workflow of the organization and assigning the task among the developers. Firstly, the Bug is reported in BizOS, then it is verified and assigned to the developers by supervisor in BizOS then, after the completion the rest is done and kept in closed task in BizOS.

Figure 3.2 shows the BizOS application which is used to report all the bugs and error of the system. The system is first tested and then the bug and error that arises from the test is reported in the BizOS application.

First, the bug title is given than the task is assigned to the developer with its proper label. Proper description or step is mentioned where the error is found and the task is added.

Figure 3.3 shows BizOS workflow begins with tasks being labeled as "Todo," indicating that they are awaiting action. As the work commences, tasks transition to the "In Progress" status, signifying active development or implementation. However, sometimes tasks may be put on "In progress" when there are dependencies or external factors preventing them from advancing. Once development is complete, tasks move to the "Test" status for quality assurance and testing to ensure they meet requirements. If any issues are discovered during testing, the tasks can be moved back to "In Progress" for further work, indicated by the "Reopen" status. Finally, when a task is successfully tested, without issues, it proceeds to the "Close" status, marking it as complete and meeting all quality standards. This structured workflow helps teams manage and monitor the progress of tasks, with the flexibility to address delays or issues that may arise during the process.

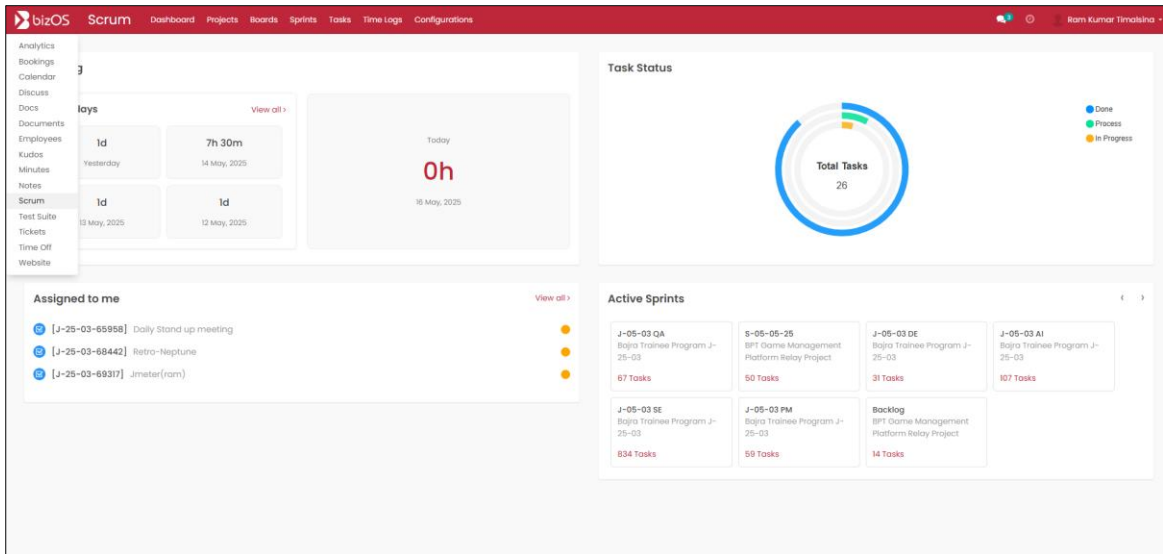

Figure 3.2: BizOS Application

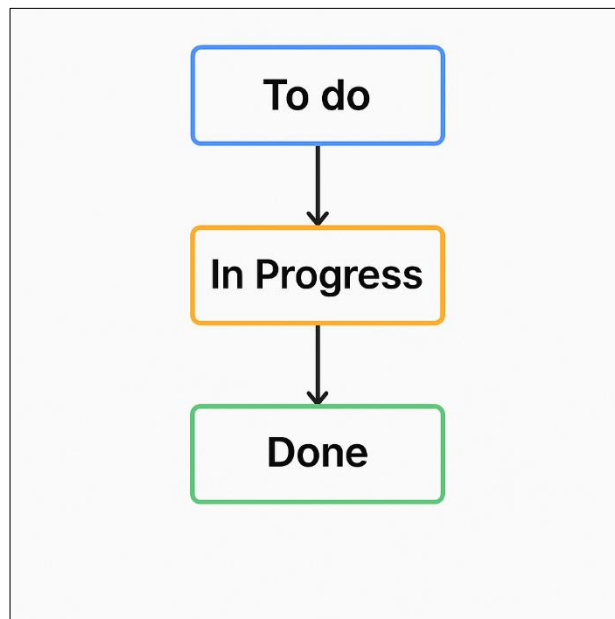

Figure 3.3: Workflow of Project

3.4.7.iii Cypress

Cypress is used for automation testing where test script is written in the JavaScript (JS). The url that should be tested is given and the login field of the system like username and password field is automatically filled and the system is logged. The code is:

For Appraisal Creation:

Test script for Admin Appraisal creation and mailing:

```
import {  
  registerExceptionHandler,  
  clickOnAppraisal,  
  expectedFields,  
  expectedQuarterFields,  
  openSurveySharing,  
  uiAppraisalCreation,  
} from "../../utils/utils";  
  
describe("Admin Appraisal creation flow", () => {

```

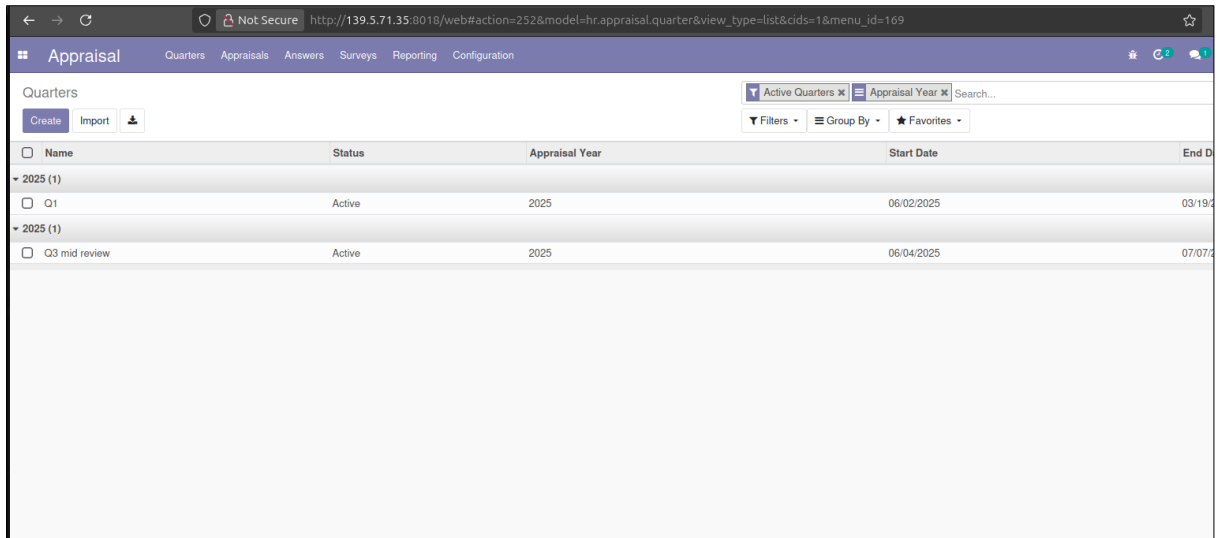

Figure 3.4: Appraisals Survey Creation

Above figure 3.4 represent Appraisal Survey Creation module and code represent the functionality testing of the Admin Appraisal Module, where both positive and negative test cases are executed. Various Cypress commands are used to simulate user actions. The `get` command locates elements, `contains` finds text-based elements, `visit` navigates URLs, `type` inputs data, `click` performs button clicks, and `should` handles assertions. Additional commands like `intercept` and `task` are used for API monitoring and email verification through Mailosaur. Test data is loaded using fixtures, and reusable functions ensure modularity. This test validates that admins can create appraisals, configure surveys, and handle email invitations effectively.

Test for Survey Creation:

```

import {
  registerExceptionHandler,
  clickOnAppraisal,
  kanbanItems,

```

```
surveyFields,  
expectedFields,  
surveyParticipantList,  
questionType,  
clickOnSurvey,  
getFormattedDateTime,  
participantsFilteredEmails,  
mockedResults  
} from ".././../utils/utils";
```

```

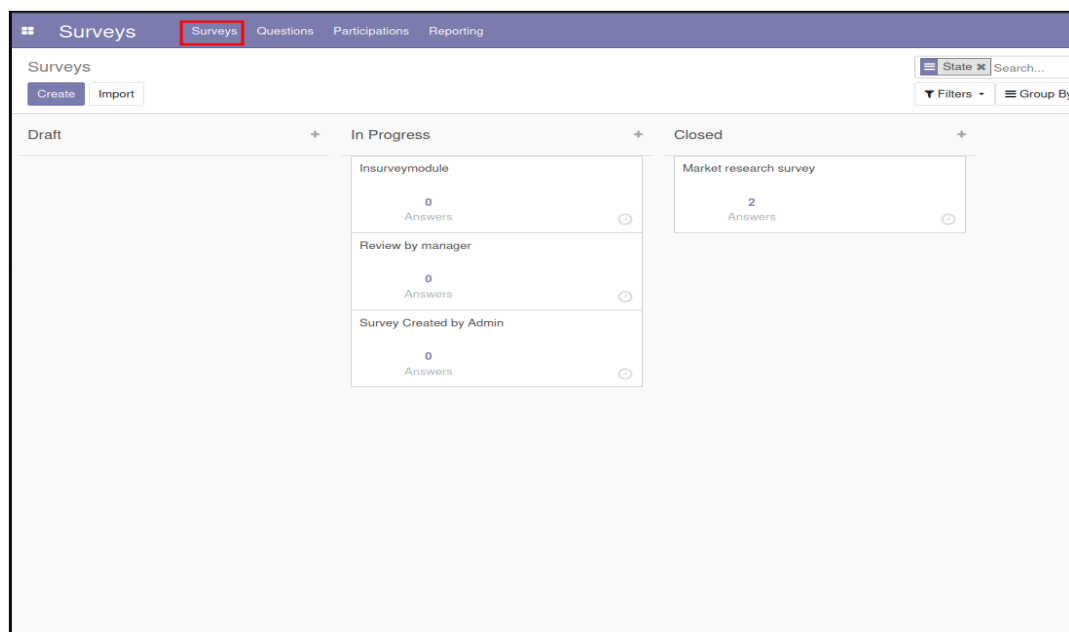

Figure 3.5: Survey Creation

Figure 3.5 and code illustrate the functionality testing of the Survey Creation Module for admin users, where both positive and negative test scenarios are covered. Various Cypress commands are used throughout the tests to simulate admin interactions. The get command is used to locate page elements, while contains helps find specific content based on visible text. The visit command navigates to the dashboard, and type is used to input survey titles and questions. The click command performs actions like creating, saving, or dragging

survey cards, and should is used to assert conditions like visibility and content. Additionally, intercept and task are used to handle and mock API calls and validate backend behavior. The test also verifies survey creation from Kanban view, drag-and-drop between survey stages, question editing, participation management, filtering, exporting data, and deletion. Fixture files are used to load reusable test data, and custom utility functions keep the test structure clean and modular.

CHAPTER 4

CONCLUSION AND LEARNING OUTCOMES

4.1 Conclusion

Finding and locating the issue in the project and preparing required documentation for the products, such as test plans, test scenarios, test cases, and so on, as well as being responsible for ensuring the quality of products and services was the main work in this project.

Finally, with the help of quality assurance the outcome of this project became error free and can be implemented in real life without any issue. Hence, this three month of Internship has been really fruitful as the starting phase of career in this IT field.

4.2 Learning Outcome

The Internship had the following learning outcomes:

- Gained experience in Manual Testing
- Gained knowledge of different testing technique
- Practical experience in actual workplace.
- Found career, developed new and better skills, gained confidence.
- Developed communication, interpersonal, and other critical skill.
